

The Industry Standard
for Digital Trust

New SAFE-BioPharma Standard® Trust List Enables Validation of Digital Signatures in Both US and EU

Tenafly, N.J. (November 9, 2017) -- -- A newly published SAFE-BioPharma Trust List vastly improves workflows involving sensitive and proprietary electronic documents exchanged between the US and the EU. When incorporated into the EU framework, the Trust List can allow European Relying Parties to validate digital signatures issued by SAFE-BioPharma certified providers in the same way they can validate digital signatures from EU-recognized issuers.

The Trust List is based on a newly developed SAFE-BioPharma conversion tool.

SAFE-BioPharma is the first and only entity supporting both US and EU models for validating digital signatures.

SAFE-BioPharma, Trans Sped, and Exostar, EU and US-approved Trust Service Providers, developed the new EU-compliant Trust List. The Trust List is available on the [SAFE-BioPharma website](#). Source code for the Trust List conversion tool is available free on [GitHub](#).
